

DeepNet Security HealthCheck

A 15-Minute Self-Audit for Safer Devices & Networks

1. Basic Device Security

- ☐ Is your device password-protected at startup?
- ☐ Are your operating system and software fully updated?
- ☐ Is your antivirus or endpoint protection software running?
- ☐ Do you regularly back up important data?
- ☐ Are unused programs/services disabled?

2. Internet & Wi-Fi Safety

- ☐ Are you using a secure Wi-Fi network (WPA2 or WPA3)?
- ☐ Is your router password changed from the factory default?
- ☐ Is remote access to your router disabled?
- ☐ Do you review connected devices regularly?
- ☐ Do you avoid public Wi-Fi or use a VPN when on it?

3. Account & Identity Protection

- ☐ Do you use a password manager for strong, unique passwords?
- ☐ Is multi-factor authentication enabled where possible?
- ☐ Do you regularly check for leaked credentials (e.g. HaveIBeenPwned)?
- ☐ Have you limited app permissions on your phone and devices?

4. Red Flags to Watch For

- ☐ Your system is running slowly or acting unusually
- ☐ You've seen unexpected pop-ups or browser redirects
- ☐ You've received suspicious emails or login attempts
- ☐ You're unsure if you clicked something malicious recently

What To Do If You Answered 'No' More Than 3 Times

You're not alone. Most small businesses and individuals aren't protected nearly as well as they think. DeepNet can help - affordably, privately, and with no hard sell.
